WEBINAR

Your Transition to Microservices

It's easier than you may think.

Joe Epplin

Wednesday, March 13, 2019

“Disruption is always good for
someone.”

— *David Smith*

Myths We Are Exploding

1. Any change is a disruption
 - Decomposing the problem
2. Disruption is only a technology issue
 - Connecting business and tech
3. Disruption is only for digital *giants*
 - This process works for all businesses

Agenda

1. Starting Point
2. Not All That Bad
3. Transitioning
4. Recipe

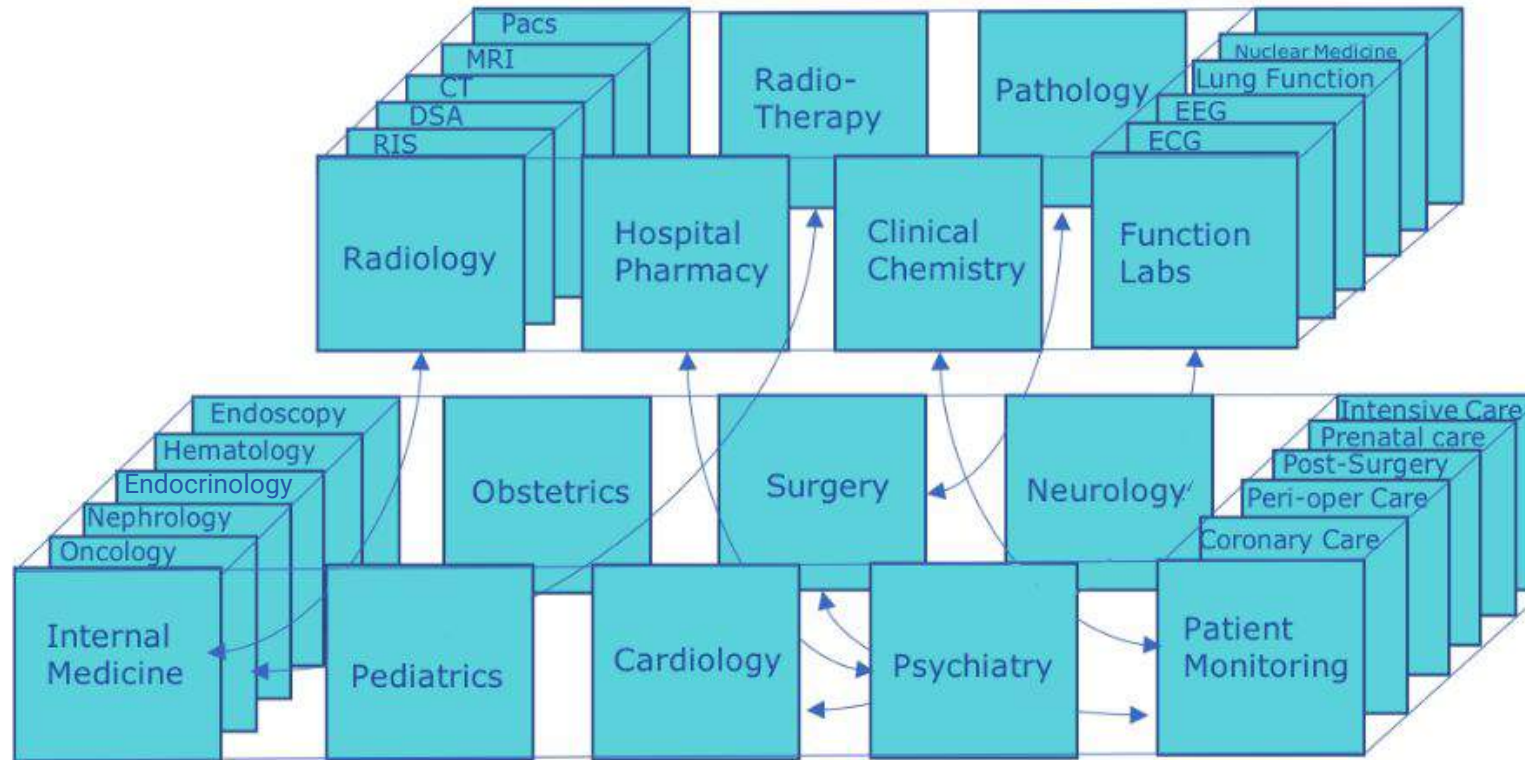

Monolithic Legacy Systems

Example Monolithic System

Clinical Support Systems

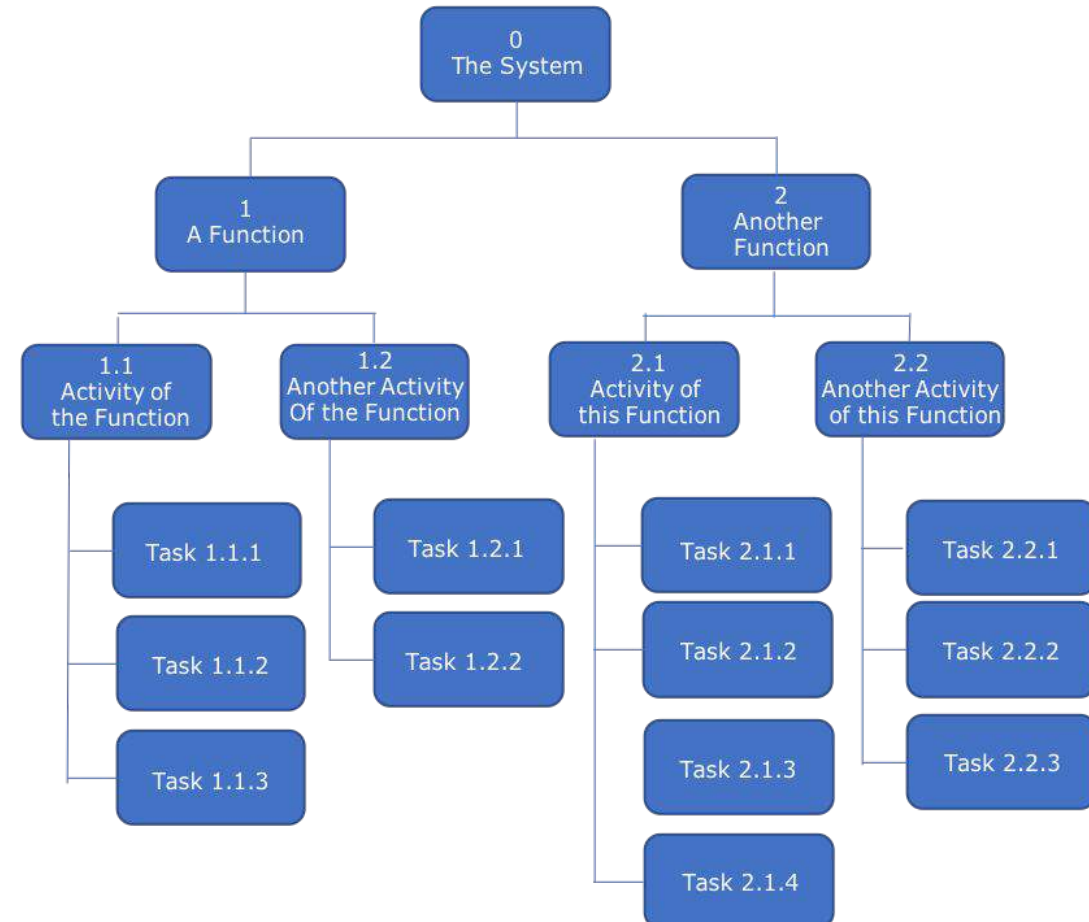

Clinical Departmental Systems

These Systems Support Business Processes

There is a taxonomy for these processes.

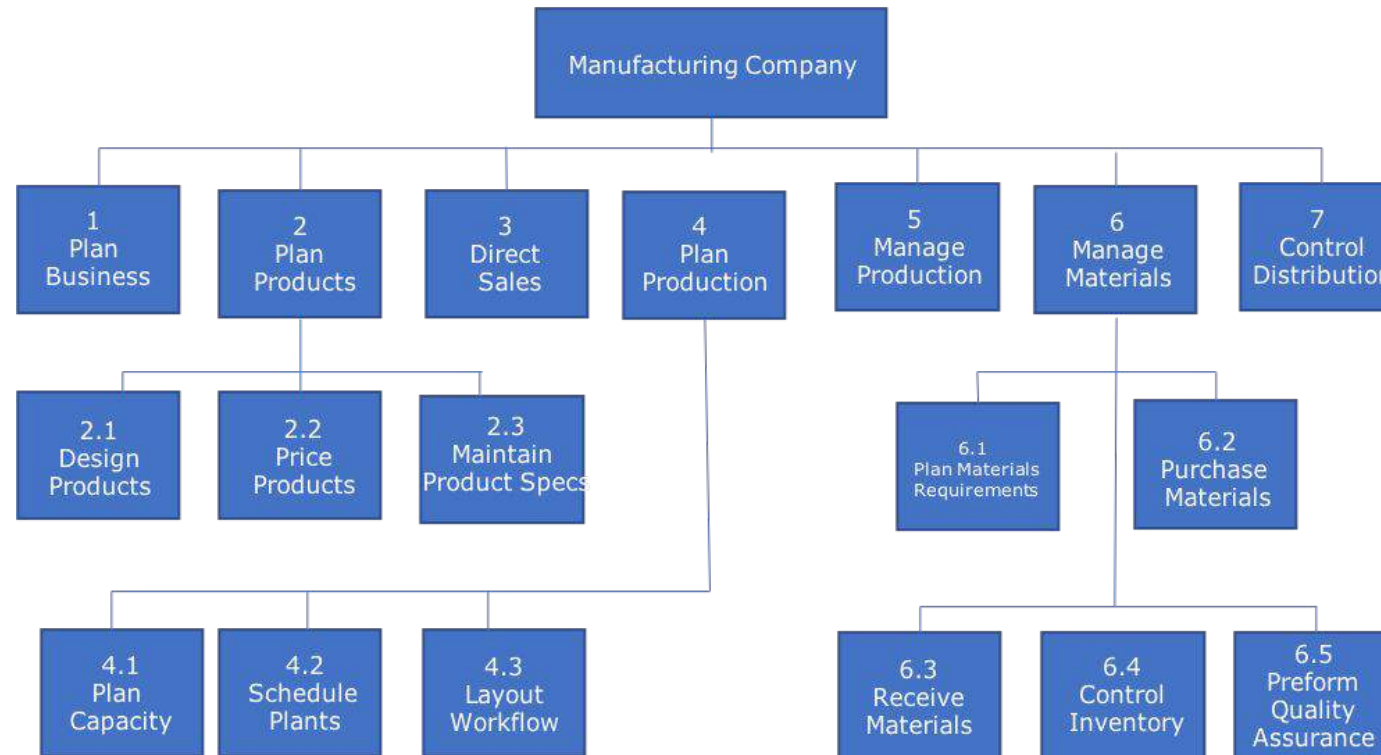

Decomposition Diagram (Hierarchy Chart)

Sample Decomposition

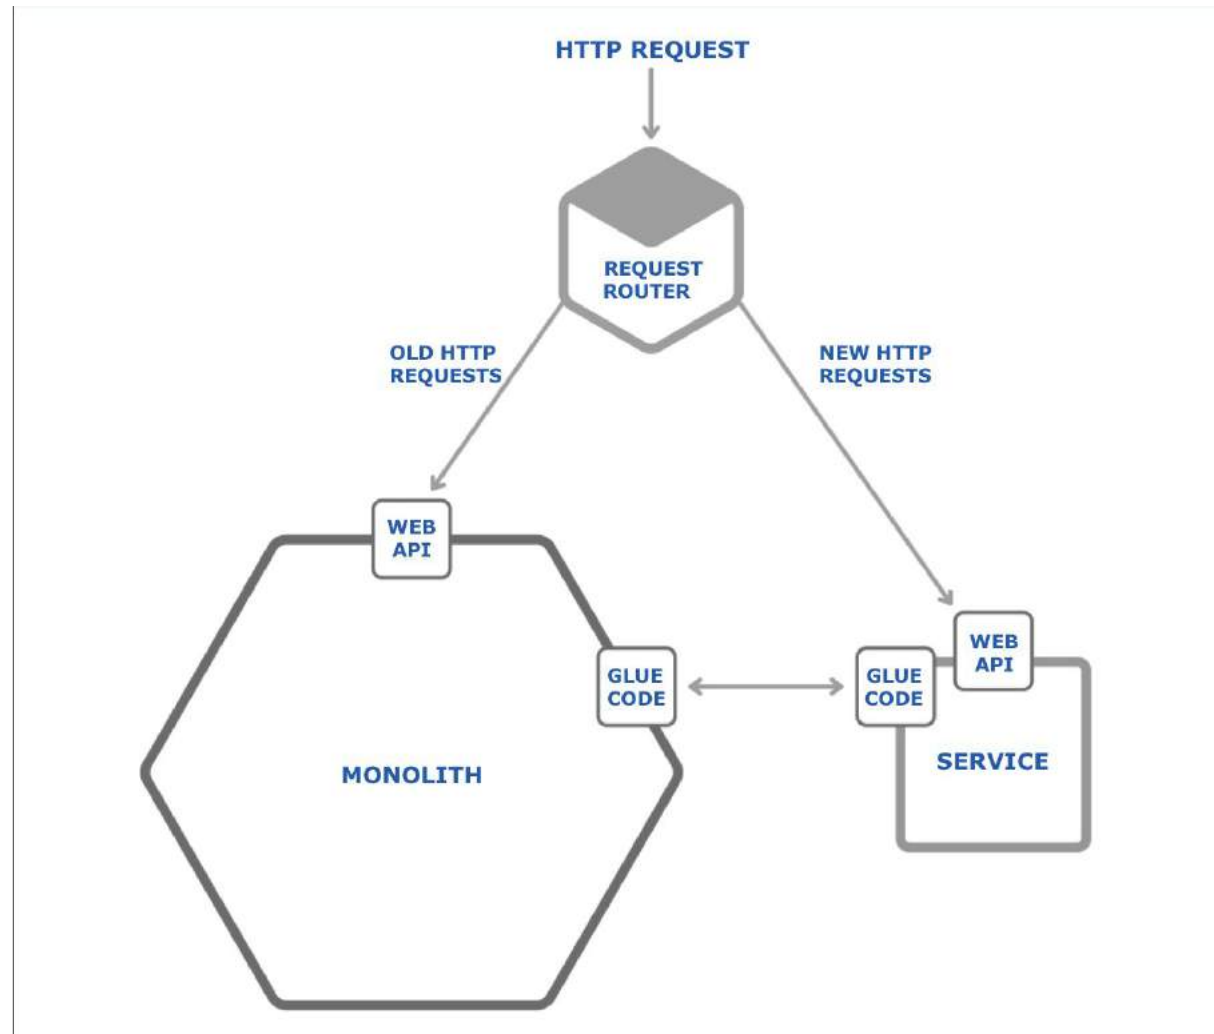

There is a taxonomy for these processes

Enterprise Level Function Chart

Note
Conway's
Law

Monoliths and Microservices Can Coexist

Strangler pattern

Recipe

Technical Aspects

Declarative, reactive, compile-time HTTP client

Non-blocking HTTP server built on Netty

Fast and easy testing

Efficient compile-time dependency injection and AOP (not reflection)

Fully reactive and non-blocking apps

Built in cloud support (common discovery services, distributed tracing tools, and cloud runtimes)

Business Process Decomposition / Refactoring

1. Model systems with highest business value first
2. Do something concrete with the model as quickly as possible
3. Grow from there
4. Highlighting business process inefficiencies will inform the microservice architecture
5. Diagrams should fit on one page
6. Manage different versions of the diagram for different stakeholders
7. BPD depicts information flows in business processes, not data flow
(Conway's Law)

Disruptive Solutions for a Connected World.™

We deliver mission-critical software solutions that accelerate innovation within your organization and stand up to the evolving demands of your business.

AREAS OF EXPERTISE

INDUSTRIAL IoT

We equip industrial environments with seamless connectivity and real-time analytics that reduce operating costs and deliver on customer demands.

MACHINE LEARNING

We can modernize your legacy applications and enable scalable, integrated AI capabilities tailored to your unique sets of data.

BLOCKCHAIN CONSULTING

We are at the forefront of blockchain technology, and we have practical, real-world experience with its implementation.

CLOUD SOLUTIONS

We combine software engineering expertise with cloud-native architecture to accelerate innovation within your organization.
